                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ; OTHER INFORMATION: Description of Artificial Sequence:
; OTHER INFORMATION: Oligonucleotides, linkages between positions
; OTHER INFORMATION: to 20 are phosphorothioate, linkages between
; OTHER INFORMATION: positions 20 to 28 are N3' to N5'
; OTHER INFORMATION: phosphoramidates
; OTHER INFORMATION: position 28 is modified by a 3'-aminodeoxyribosyl
; OTHER INFORMATION: residue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 11, Application US/09817387
Patent No. US20010039263A1
GENERAL INFORMATION:

APPLICANT: James D. Thompson
APPLICANT: Fenneth G. Draper
TITLE OF INVENTION: METHOD AND REAGENT FOR
TITLE OF INVENTION: TREATMENT OF DISEASES CAUSED
TITLE OF INVENTION: BY EXPRESSION OF THE BCL-2
TITLE OF INVENTION: GENE
NUMBER OF SEQUENCES: 22
CORRESPONDENCE ADDRESS:
COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5" Diskette, 1.44 Mb storage
COMPUTER: IBM COMPATIBLE
OPPRATING SYZEM: IBM P.C. DOS (Version 5.0)
SOFTWARE: WordPerfect (Version 5.1)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/936,421
FILING DATE: 19920826
CLASSIFICATION: 435
PRIOR APPLICATION DATA: including application
PRIOR APPLICATION DATA: described below:
APPLICATION NUMBER:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IBM Compatible

Sequence 4, Application US/09724426
| Sequence 4, Application US/09724426
| Patent No. 6414134
| GENERAL INFORMATION:
| APPLICANT: Reed, John
| TILE OF INVENTION: Regulation of BCL-2 Gene Expression
| TILE OF INVENTION: Regulation of BCL-2 Gene Expression
| FILE REFERENCE: 10412-024
| CURRENT PFLIATOR DATE: 2000-11-28
| NUMBER OF SEQ ID NOS: 29
| SOFTWARE: PatentIn version 3.0
| SEQ ID NO 4
| LENGTH: 33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         333

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 11, Application US/08599654

Sequence 11, Application US/08599654

Patent No. 5882925

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION:
TITLE OF INVENTION:
TITLE OF INVENTION:
THE TRAINMENT AND DIAGNOSIS OF CARDIOVASCULAR DISEASE
NUMBER OF SEQUENCES: 54
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MOLECULE TYPE: other nucleic acid
DESCRIPTION: /desc = "synthetic oligonucleotide"
                                                                                                                                                                                                                                          COMPOTER READABLE FORM:
MEDIUM TYPE: Floppy disk
MEDIUM TYPE: Floppy disk
COMPOTER: TBM FC Compatible
OPPERATING SYSTEM: FC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
FILING DATE: 15-MAR-1996
CLASSIFICATION: 800
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Conservative:

Patent No. 6008193
GENERAL INFORMATION:
GAPPLICANT: Leonard Garfinkel, et al.
TITLE OF INVENTION: Cloning and Production of Human Von
TITLE OF INVENTION: Willebrand Factor GPID Binding Domain Polypeptides and
TITLE OF INVENTION: Methods of Using Same
                                                                                                                                                                                     CURRENT APPLICATION DATA:

SOFTWARE: Petentin Release #1.0, Version #1.30 (EPO)

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/497,312

FILING DATE: 30-UDN-1995

PRIOR APPLICATION DATA:

APPLICATION NUMBER: US/09/44

ATTORNEY/AGENT INFORMATION:

NAME: BOND, LAURENCE B.

REGISTRATION NUMBER: 30,549

REFERENCE/DOCKET NUMBER: 2629US
